TEKLA

SSF Ltd provides a sub-contract Structural Steelwork detailing service to the steelwork fabricator using the latest Tekla Structures 3D Modeling Software. Flexible services can be offered to work as an external sub contractor or as part of an in-house detailing team.

The service can be tailored to suit your needs and incorporate any existing systems for data transfer. Ensure draughting system is working to latest Tekla capabilities and service release.

Technical expertise with extensive detailing knowledge having over 15 years' experience in the structural steel detailing industry both in the UK and globally.

Reputation of SSF is built on quality of service providing clash free modeling with the highest standard of drawings on time and within budget. Design changes are responded to effectively to reduce any impact on program and cost.

Components, macros, databases, custom QA filters, phase & lot management can be developed to accelerate detailing time, reduce errors, improve efficiency and maintain program dates.

SSF Ltd can provide a service dedicated to your drawing office/fabrication office. Quick turn around provided whilst your core work force concentrates on the production aspects of your business.

The above service is provided to cut down detailing time in-house and provide a fully efficient Tekla set up prior to future projects. The system components stay with you and can be constantly updated and reviewed as new releases of Tekla become available.

Please feel free to contact SSF Ltd to discuss any of your projects or internal requirements.
